(54) Title: METHOD, ARRANGEMENT AND USE OF AN IMPLANT FOR ENSURING DELIVERY OF BIOACTIVE SUBSTANCE TO THE BONE AND/OR TISSUE SURROUNDING THE IMPLANT

(57) Abstract: In connection with implants for bone or tissue, delivery of bioactive substances to the bone or tissue is ensured. The implant is designed with an internal space, and one or more bodies comprising the bioactive substance are designed to cooperate with the bone and/or tissue structure surrounding the implant and to release the bioactive substance to the said structure. The said body or bodies is/are applied in the space in order thereby to be exposed to the surrounding structure and deliver the bioactive substance or substances to the latter.
